ABSTRACT

Data from the U.S. Census describe the economic and social characteristics of students enrolled in elementary, secondary, and higher education as of October 1994. At that time approximately 69.3 million persons were enrolled in regular education at nursery school through college levels. About 45.1 million of these were between the traditional school ages of 6 and 17. About 8.1 million children were enrolled in nursery school or kindergarten, and elementary school enrollment was higher than that of the previous year at about 31.5 million. High school enrollment totaled 14.6 million, up significantly from the 13.7 million of fall 1993. The annual high school dropout rate was higher, at about 5%, than that of 1993. In October 1994, 15.0 million people were enrolled in colleges across the nation, an increase from the 13.9 million of 1993. Data are shown for U.S. students for age, sex, race, Hispanic origin, marital status, family status, family income, education of the householder, labor force status, metropolitan residence, region, and mother's labor force status and education (for preprimary education). Vocational school enrollment is shown separately. Three appendixes present supplementary tables, definitions and explanations, and a discussion of the source and accuracy of the estimates. (Contains 9 text tables, 3 figures, 19 detailed tables, and 15 appendix tables.) (SLD)

Acknowledgments

This report was prepared in the Education and Social Stratification Branch of the Population Division, under the general direction of **Jennifer C. Day**, Chief. Overall direction was provided by **Robert A. Kominski**, Assistant Chief, Population Division.

Data collection was conducted by Bureau of the Census field representatives, under the overall direction of **Marvin D. Raines**, Acting Chief, Field Division. Survey operations and data processing were coordinated by **Ronald R. Tucker** and **James H. Warden**, and programming of tabulations was performed by **Randy J. Gardner**, Demographic Surveys Division. **D. Darcel Carter** assisted with table and manuscript preparation. **Arlene Saluter**, Population Division, reviewed the contents of the report. Statistical review and appendix C were provided by **G. Machell Town**, Statistical Methods Division.

The staff of the Administrative and Customer Services Division, **Walter C. Odom**, Chief, performed publication planning, design, composition, editorial review, and printing planning and procurement. **Nelsa D. Brown** provided publication coordination and editing.

DETAILED TABLES

1. Enrollment Status of the Population 3 Years Old and Over, by Age, Sex, Race, Hispanic Origin, and Selected Educational Characteristics: October 1994 1
2. Enrollment Status of the Population 3 Years Old and Over, by Age, Metropolitan Status, Race, Hispanic Origin, and Selected Educational Characteristics: October 1994 4
3. Single Grade of Enrollment and High School Graduation Status for Persons 3 Years Old and Over, by Age (Single Years for 3 to 24 Years), Sex, Race, and Hispanic Origin: October 1994 8

4. Preprimary School Enrollment of Persons 3 to 6 Years Old, by Residence, Mother's Labor Force Status and Education, Family Income, Race, and Hispanic Origin: October 1994 15
5. Level of Enrollment Below College for Persons 3 to 24 Years Old, by Control of School, Metropolitan Status, Sex, Race, and Hispanic Origin: October 1994 20
6. Enrollment Status of Primary Family Members 3 to 17 Years Old, by Family Income, Level of Enrollment, Control of School, Sex, Race, and Hispanic Origin: October 1994 21
7. Enrollment Status of Primary Family Members 3 to 17 Years Old, by Educational Attainment of Family Householder, Level of Enrollment, Control of School, Sex, Race, and Hispanic Origin: October 1994 24
8. Persons 15 to 24 Years Old Enrolled in Secondary School in Previous Year by Current Enrollment Status, Age, Sex, Race, Hispanic Origin, and Family Income (for Dependent Family Members): October 1994 27
9. College Enrollment of the Population 15 Years Old and Over, by Attendance Status, Type and Control of School, Age, Sex, Race, and Hispanic Origin: October 1994 31
10. Attendance Status of College Students 15 Years Old and Over, by Sex, Age, Year and Type of College, Race, and Hispanic Origin: October 1994 37
11. Employment Status of High School and College Students 15 Years Old and Over, by Level of School, Type of College, Attendance Status, Age, Sex, Race, and Hispanic Origin: October 1994 39
12. Population 15 Years Old and Over Enrolled in Vocational Courses, by Employment Status, Age, Sex, Race, and Hispanic Origin: October 1994 45
13. Level of Enrollment of the Population 15 Years Old and Over, by Type of School, Attendance Status, Age, Sex, Marital Status, Race, and Hispanic Origin: October 1994 49
14. Enrollment and Employment Status of Recent High School Graduates 16 to 24 Years Old, by Type of School, Year of School, Attainment Level for Persons Not Enrolled, Sex, Race, and Hispanic Origin: October 1994 55
15. Enrollment Status of Primary Family Members 18 to 24 Years Old, by Family Income, Level of Enrollment, Type and Control of School, Attendance Status, Sex, Family Status, Race, and Hispanic Origin: October 1994 59
16. Families by Full-Time College Enrollment of Dependent Members 18 to 24 Years Old, by Family Income, Race, and Hispanic Origin: October 1994 67
17. Enrollment Status of Dependent Family Members 18 to 24 Years Old, by Educational Attainment of Family Householder, Level of Enrollment, Attendance Status, Sex, Race, and Hispanic Origin: October 1994 68
18. College Enrollment This Year, by Enrollment Status Last Year, Attendance Status, Years of School Completed, Age, Sex, Race, and Hispanic Origin for High School Graduates: October 1994 71
19. Families With Children 5 to 17 Years Old by Enrollment Status in Kindergarten to High School, by Control of School, Family Income, Metropolitan Status, Region, Type of Family, Race, and Hispanic Origin: October 1994 77

School Enrollment - Social and Economic Characteristics of Students: October 1994

(NOTE: The estimates for 1994 in this report are inflated to national population controls by age, race, sex, and Hispanic origin. The population controls are based on results of the 1990 census and adjustment for undercount carried forward to 1994. The 1994 data are not strictly comparable to data for 1993 and earlier years for two reasons:

- The introduction of population controls based on the 1990 census, adjusted for the estimated undercount of 1.6 percent, had a pronounced effect on population levels in some age groups. Data for 1993 and previous years were inflated to population controls based on the 1980 census, without adjustments for undercount.
- A major redesign of the CPS was implemented in January 1994, when the new electronic survey instrument in which all responses are entered directly into the computer by interviewers was introduced. Improved questioning using the computer may have contributed to the increase in enrollment at some levels. Comparison of two sets of estimates for 1993 shown in the Appendix tables gives reason to believe that the change in the survey instrument and the new population controls both contributed to the higher estimated enrollment levels.

All demographic surveys, including the CPS, suffer from undercoverage of the population, which results from missed housing units and missed persons within sample households. The overall CPS undercoverage is about 7 percent. Undercoverage varies with age, sex, and race. For some groups, such as 20 to 24 year old Black males, the undercoverage is as high as about 35 percent. The weighting procedures used by the Census Bureau partially correct for the bias due to undercoverage. However, its final impact on estimates is unknown. For details, see appendix C.

Information on the Hispanic population shown in this report was collected in the 50 States and the District of Columbia, and therefore, does not include residents of Puerto Rico.)

HIGHLIGHTS

(Figures shown in parentheses define 90 percent confidence intervals. For details of calculation, see "Appendix C, Source and Accuracy of the Estimates.")

- In October 1994, 69.3 (±.6) million persons were enrolled in regular school - nursery school through college. About 45.1 (±.1) million of those enrolled were between the traditional elementary and secondary school ages of 6 and 17.
- About 8.1 (±.2) million children were enrolled in nursery school or kindergarten in 1994, (4.3 (±.2) million in nursery school and 3.9 (±.2) million in kindergarten) which was statistically different from the 7.2 (±.2)[1] million reported enrolled in the fall of 1993.
- Elementary school enrollment (grades 1-8) stood at 31.5 (±.2) million persons, which was statistically different from the 30.6 (±.3) million reported one year earlier.
- High school enrollment totalled 14.6 (±.2) million persons, up significantly from the 13.7 (±.2) million enrolled in the fall of 1993.
- The annual high school dropout rate (from grades 10-12) for 1994 was statistically different from the 1993 figure: 5.0 (±.6) vs. 4.2 (±.6) percent.
- The "dropout pool" (persons not enrolled and not a high school graduate) of young adults ages 18 to 24 totalled 3.4 (±.1) million or 13.3 (±.6) percent of this age group. This was different, numerically but not proportionately, from the 1993 values of 3.1 (±.1) million and 12.7 (±.5) percent.
- The number of persons enrolled in college totalled 15.0 (±.3) million, which was significantly different from the 13.9 (±.3) million enrolled one year before. About 6.1 (±.2) million college students, or 41 (±.1) percent, were 25 years and over.

SCHOOL ENROLLMENT IN 1994

This report presents detailed tabulations of data on school enrollment of the civilian noninstitutional population in October 1994. It also presents summary time

---

[1] 1993 data are those reported in the previous report in this series, Current Population Report, Series P20-479, and are not adjusted for undercount.

Table A. **School Enrollment by Level: 1994, 1984, 1974 and 1964**

[Numbers in thousands]

Level	1994	1984	1974	1964
All students	69,272	58,881	61,360	52,490
Nursery school	4,259	2,354	1,607	471
Kindergarten	3,863	3,484	3,252	2,830
Elementary	31,512	26,838	31,126	31,734
High school	14,616	13,900	15,522	12,812
College	15,022	12,304	9,854	4,643

Note: For persons 3 years old and over, except in 1964, for persons 3 to 34 years.

series data collected since the beginning of the survey. The data are from the October school enrollment supplement to the Current Population Survey (CPS). Data on school enrollment have been collected annually in the CPS since 1946 and reported in this publication series. The data cover enrollment in "regular school", which includes nursery school, kindergarten, elementary school, high school, and college and professional school.

Data are shown by the following characteristics: age, sex, race, Hispanic origin, marital status, family status, family income, education of the householder, labor force status, metropolitan residence, region, and mother's labor force status and education (for preprimary enrollment). The following enrollment characteristics are shown: level and grade of school, public/private school, full-time and part-time attendance, and two-year/four-year college. Vocational school enrollment is shown separately.

The Nation's Students

In October 1994, 69.3 million people were enrolled in regular schools throughout the United States. This total included 4.3 million children in nursery school and 3.9 million in kindergarten, 31.5 million in elementary school, 14.6 million people in high school, and 15.0 million in college.

While elementary and high school are largely affected by population trends, preprimary and college enrollments are affected by changes in enrollment rates as well as by population trends. Nursery school increased 8 fold from 1964 to 1994, as shown in Table A and Figure 1 . While the size of the eligible age group was not different in those two years, the enrollment rate of 3 and 4 year olds rose from 9.5 percent to 47.3 percent.

Enrollment at the college level tripled in that period, caused by both increases in the eligible population and higher enrollment rates.

Preprimary Enrollment

About 61.0 percent (7,514,000) of children ages 3 to 5 years old were enrolled in preprimary school in the fall of 1994 (Table 4). Among children 3 and 4 years old 47.3

Figure 1.
School Enrollment by Level: 1964, 1974, 1984, and 1994

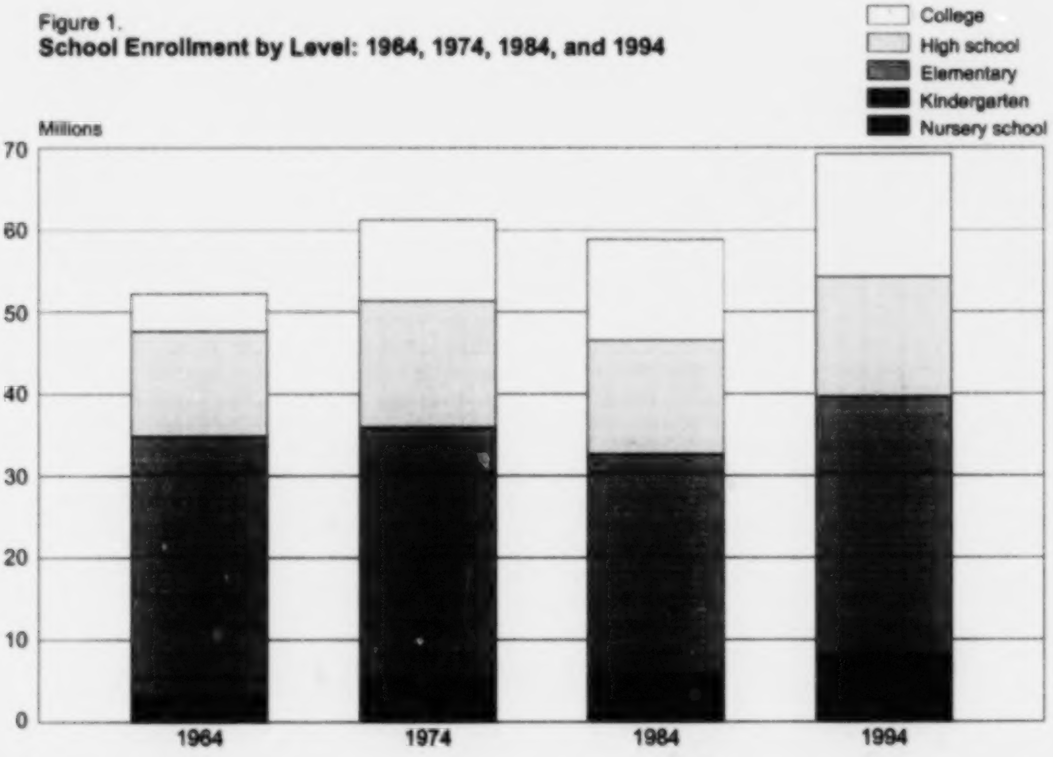

Table B. **Nursery School Enrollment, by Full-day and Public School Attendance, Race, and Hispanic Origin, for Children 3 and 4 Years Old: 1994, 1984, 1974**

[Numbers in thousands]

Characteristic	1994	1984	1974
All races	8,284	7,188	6,966
Enrolled nursery	3,608	2,188	1,515
Percent enrolled	43.6	30.4	21.7
Full-day	1,611	754	485
Percent full-day	44.7	34.5	32.0
Public school	1,489	671	388
Percent public	41.3	30.7	25.6
White	6,509	5,782	5,804
Enrolled nursery	2,881	1,777	1,273
Percent enrolled	44.3	30.7	21.9
Full-day	1,169	510	331
Percent full-day	40.6	28.7	26.0
Public school	1,012	475	271
Percent public	35.1	26.7	21.3
Black	1,343	1,131	1,029
Enrolled nursery	597	323	204
Percent enrolled	44.5	28.7	19.8
Full-day	396	203	144
Percent full-day	66.3	62.8	70.6
Public school	408	167	108
Percent public	68.3	51.7	52.9
Hispanic	1,221	621	485
Enrolled nursery	313	106	NA
Percent enrolled	25.6	17.1	NA
Full-day	158	55	NA
Percent full-day	50.5	51.9	NA
Public school	207	88	NA
Percent public	66.1	83.0	NA

Note: Persons of Hispanic origin may be of any race.

percent were enrolled. There was only a slight difference in enrollment rates for White 3- and 4-year-olds (47.0) and Black 3- and-4-year-olds (52.0 percent). The level for Hispanic children (who may be of any race) was significantly lower (30.8 percent). Given the availability of public kindergarten in all states, the vast majority of 5-year-olds were enrolled in school (95.0 percent). Nursery and preschool programs help young children become ready to learn when they enter kindergarten and first grade. Since schooling at this level is not part of the regular public school system in most areas, it is not available to all children because of the cost of attending privately operated schools.

Although Head Start and other locally funded preschool programs are available to children in low-income families, nursery school attendance is still linked to income. About 57.0 percent of 3-and 4-year-olds from families with incomes of $40,000 or more attended nursery school in 1994 compared with 35.6 percent of those from families with incomes less than $20,000 (Table 4). Three-fourths of these lower-income nursery school students attended public schools compared with one-fifth of the higher-income students.

Nursery school enrollment is also related to the education and labor force participation of a child's mother. Children of mothers who were college graduates were substantially more likely than others to attend —62.3 percent compared with 26.8 percent of children whose mothers did not finish high school. Children of mothers in the labor force were more likely to attend nursery school than those whose mothers were not in the labor force (47.8 percent compared with 37.7 percent).

Nursery school may provide child care for some families. Although the majority of nursery students attend part day, among children whose mothers worked full time, 60.1 percent attended full-time compared with 34.2 percent of those with mothers not in the labor force.

Although Black and White children 3 and 4 years old were not different in proportions attending nursery school (about 44 percent), Black children were more likely to be in public programs —two-thirds compared with one-third of Whites (Table B). Black children were also more likely than White children to be enrolled full day. About 25.6 percent of Hispanic 3- and 4-year-olds were enrolled in nursery school and two-thirds of them attended public school.

Elementary and Secondary School Enrollment

About 31.5 million children were enrolled in elementary school (grades 1 through 8) in the fall of 1994 and about 14.6 million were enrolled at the high school level(grades 9 through 12) in 1994. Although both of these estimates were substantially above the reported 1993 figures, a significant proportion of the change was due to revisions in the population base (Table I), particularly for elementary school, for which there was not a significant difference between the 1994 estimate and the revised 1993 estimate.

Total enrollment in grades 1 to 12 was only slightly different in 1994 from enrollment thirty years before —46.1 million students (3 to 34 years old), compared with 44.5 (Table C). In the intervening period, total enrollments had been both higher and lower. In 1970 as many as 48.7 million students were enrolled, whereas in 1984 the figure was only 40.6 million. Table A-1 shows single year estimates at all levels. Since change in elementary and high school enrollment is primarily a result of changes in births in earlier years, the fluctuations in total enrollment mask more significant changes at each level, as larger and smaller cohorts progress through the 12 years of schooling.

Given the nearly universal nature of schooling for young persons, the number of persons enrolled in elementary school closely parallels the size of the population 6 to 13 years of age. Consequently, during the 1970's and early 1980's, elementary school enrollments declined from the 1964 level before rising again in the late 1980's and 1990's (Figure 1). While elementary school enrollment peaked around 1970, high school

Table C. **Elementary and High School Enrollment by Type of School and Ethnicity: 1994, 1984, 1974, and 1964**

[Numbers in thousands. Persons 3 to 34 years old]

Race and ethnic group	Elementary and high school				Percent of total enrolled			
	1994	1984	1974	1964	1994	1984	1974	1964
All groups	46,008	40,615	46,573	44,546	100.0	100.0	100.0	100.0
White, nonHispanic	30,138	29,620	36,168	38,356	65.5	72.9	77.7	86.1
Black	7,477	6,184	6,710	6,190	16.3	15.2	14.4	13.9
Hispanic	6,004	3,350	2,956	NA	13.0	8.2	6.3	NA
Other races	2,389	1,461	739	NA	5.2	3.6	1.6	NA

Note: White nonHispanic was derived by subtracting Hispanic population from White. See text. For 1964 the data are for total "White" population and for the "Black and other races" population.

enrollment reached its peak a few years later. High school enrollment was higher in 1994 than in 1984 and 1964 but lower than in 1974. During the late 1970's and 1980's, the number of students in high school fell as the size of the population ages 14 to 17 declined. Enrollment began to rise again in the 1990's.

The general entrance and exit of the "Baby-boom" cohorts (born between 1946 and 1964) from the school age population had the greatest effect on enrollment numbers. The earliest of the group entered elementary school in about 1952, so their effect on intermediate grades and high school did not occur until several years later. The cohorts of the baby-boom began entering high school around 1960. As they moved through the system, they were followed by cohorts from lower birth years, sometimes referred to as the " Baby-bust". By the mid 1980's those born in the early years of the "Echo-boom" entered school.[2] Elementary enrollment peaked in the period 1968 to 1970, then declined to a low in 1983 to 1985. After that, enrollment began to grow. High school enrollment experienced peaks and valleys a few years later —peaking in 1975-1977 and reaching a trough in 1989-1990. As of 1994, both levels were increasing slowly.

This trend is expected to continued for both groups in the near-term. The current projection of children ages 6 to 13 for the year 2000 is 32.1 million.[3] If enrollment rates for this age group remain stable, there will be at least a million more elementary students in 2000 than in 1994. Projections of 14-to-17-year olds indicate that high school enrollments will continue to rise throughout this decade, if enrollment rates remain the same.

Public and Private School Enrollment. In the 1964-1994 period, public and private enrollments followed different paths. While total enrollment grew by only 3.3 percent, private school enrollment dropped 29.8 percent and public school enrollment grew 8.8 percent. In 1994, 10.7 percent of elementary students and 7.4 percent of high school students were enrolled in private school. Thirty years before, 15.5 percent of elementary students and 11.0 percent of high school students attended private schools.

Racial and Ethnic Composition of the Student Population. As Table C shows, in 1994 slightly less than two-thirds of elementary and high school enrollment was composed of White nonHispanic students[4] compared with slightly more than three-fourths twenty years earlier. From 1974 to 1994, Black students rose from 14.4 to 16.3 percent of all elementary and high school enrollment and students of other races from 1.6 to 5.2 percent. Hispanic students rose from 6.3 to 13.0 percent of all elementary and high school students. Total minority enrollment (persons other than White nonHispanic) rose from 22.3 to 34.5 percent of all students.

Table D. **Annual High School Dropout Rates: October 1994**

Characteristic	Percent
Total	5.0
Male	4.9
Female	5.1
White	4.7
Black	6.2
Hispanic origin	9.2
Family income	
Less than $20,000	8.4
$20,000 to 39,999	4.6
$40,000 and over	1.4
10th grade	2.2
11th grade	3.7
12th grade	10.1

Note: Persons of Hispanic origin may be of any race.

---

[2] The "echo boom" is defined by the large increase in births beginning around 1977, which was due primarily to the entrance of "baby boom" women (born 1946-1964) into their prime childbearing years.

[3] Current Population Reports, Series P25-1130, "Population Projections of the United States, by Age, Sex, Race, and Hispanic Origin: 1995-2050."

[4] White nonHispanic was estimated by subtracting the Hispanic origin population from the White population. In this survey over 95 percent of persons of Hispanic origin are also classified as White.

Modal Grade. *Data on the modal grade of enrollment* provide information on the proportion of children who are retained in grade (or held back) over their school career. There will always be some children enrolled below modal grade for their age, because children do not all start school at the same age. State laws differ on minimum enrollment age and some parents choose to start their children later. State laws have also been changing in recent years to move the cut-off date forward in many States. This is seen in the youngest age group where about 18.9 percent of children 6 to 8 years old were enrolled below the modal grade at the survey date, compared with 11.1 percent in 1971 (table A-3).

In 1994, 30.9 percent of 15- to 17-year-olds were enrolled below the modal grade for their age. That same cohort was 6 to 8 years old in 1985, when 17.9 percent of them were below modal grade. Therefore, 13.0 percent were retained in grade between 1985 and 1994. Most retentions appeared to have occurred early in elementary school; the largest increase occurred by ages 9 to 11 years, when 28.4 percent were enrolled below the mode. Over the years shown in table A-3, from 1971 to 1994, the proportion below modal grade has increased for each age group.

Boys have been starting school a little later than girls. More maie children than female were below mode at age 6 to 8 years —21.1 percent vs. 16.5 percent in 1994. *Boys also have a significantly higher rate of retention as they age.* By age 15 to 17 in 1994, 35.7 percent of them, compared with 24.8 percent of girls, were below modal grade. White, Black, and Hispanic students were not significantly different in the proportion of the youngest cohort below the modal grade in 1994. Of 15- to17-year-old students, however, 29.6 percent of Whites, 37.7 percent of Blacks, and 39.9 percent of Hispanics were enrolled below the mode. (The latter two were not significantly different from each other.)

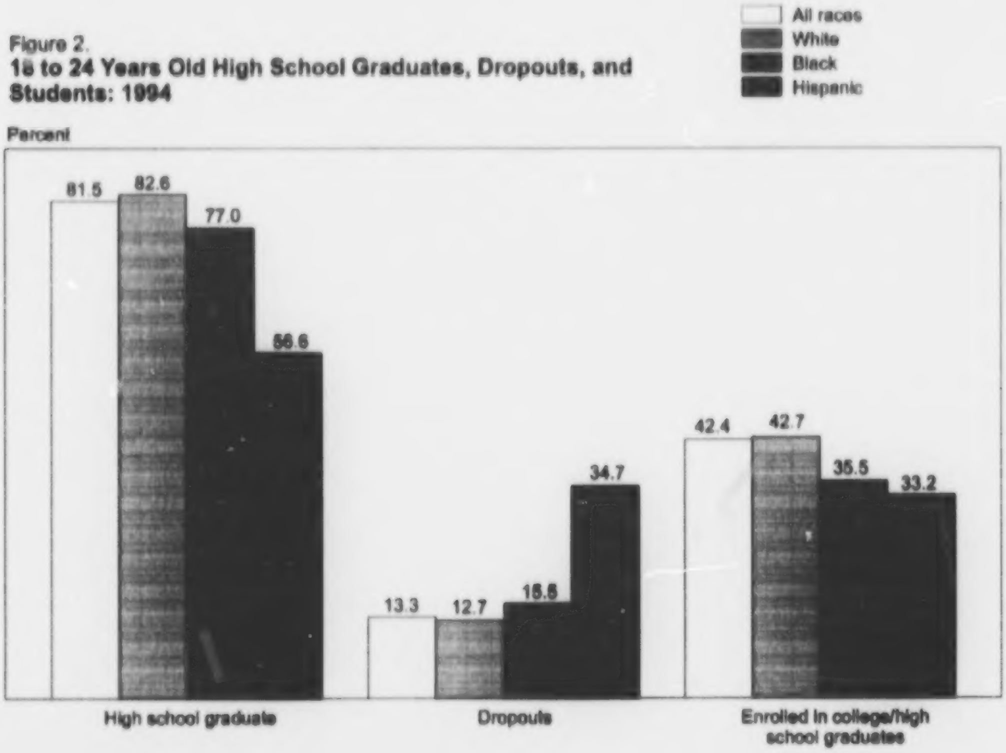
High School Dropouts. During the one-year period from October 1993 to October 1994, about 382,000, or 5.0 percent, of all students in the 10th, 11th or 12th grade dropped out of high school.[5] While this overall national dropout rate is considerably lower than the level of 6.7 percent just twenty years earlier (see Table A-3), variations among different subpopulations continue.

The data in Table D show that for 1994 the high school dropout rate of 4.7 percent for Whites is not statistically different from the Black rate of 6.2 percent, but is different from the Hispanic rate of 9.2 percent.

---

[5] The annual high school dropout rate was first presented in Current Population Reports, Series P20-413, "School Enrollment—Social and Economic Characteristics of Students: October 1983". Details of its calculation are presented in that report, as well as in Appesndix B, Definitions and Explanations, of this report.

Figure 2.
18 to 24 Years Old High School Graduates, Dropouts, and Students: 1994



(The Black and Hispanic rates are not statistically different from each other.) The rates for men and women, at 4.9 and 5.1 percent, respectively, are not statistically different from each other. Across family income groups there were differences in dropout rates. While 8.4 percent of high school students in families with incomes below $20,000 dropped out of high school in the past year, just 1.4 percent of those in families with incomes of $40,000 or more left school before graduation.

A different measure of high school dropouts is the proportion of persons who are no longer enrolled and have not completed high school. This "dropout pool" measure is to some extent a summary of the year-to-year dropout rates (and re-enrollments) over the life of a cohort. Data from Table A-5 show that among persons ages 18 to 24 years old in 1994, 3.4 million (13.3 percent) were high school dropouts; this is a significant decrease from the level of twenty years earlier when 4.1 million (15.9 percent) were dropouts. Men and women were different in their proportions of dropouts (14.4 vs. 12.3 percent). While Blacks had a somewhat higher proportion of dropouts than Whites in 1994 (15.5 vs. 12.7 percent), the level for Hispanics remained highest at 34.7 percent.

High School Graduation and Access to College

One of the goals of the education community is access to higher education for all persons. The first step in meeting this goal is similarity in high school graduation rates for different groups. Tables E and A-5 show the proportions of young adults who have completed high school and the proportions of those high school graduates who go on to college. In the 20 years these data have been available for all groups, the proportion of 18- to 24- year-olds who were high school graduates did not change, but the proportion of those graduates enrolled in college increased significantly. In 1994, 81.5 percent of all 18- to 24-year-olds were high school graduates and 42.4 percent of those graduates were enrolled in college (Figure 2). In 1974, the comparable figures were 80.7 percent and 30.5 percent respectively.

Over the past two decades, the proportion of Black 18- to 24-year-olds who were high school graduates increased significantly from 67.1 percent in 1974 to 77.0 percent in 1994. There was no change for Whites (82.6 percent in 1994). Thus the gap between the two groups was cut significantly, from 15.6 percentage points in 1974 to 5.6 percentage points in 1994. For Hispanics there was not a statistically significant improvement. Their high school completion rate remained far below the other groups at 56.6 percent.

The proportion of persons in this age group who were high school dropouts improved from 25.1 percent to 15.5 percent for Blacks and from 14.5 percent to 12.7 percent for Whites over the twenty year period. Although differences remained, the gap between Blacks and Whites had narrowed. Among Hispanics, 34.7 percent were dropouts in 1994, not different from 20 years earlier.

In 1994, men and women were not significantly different in the proportion of high school graduates who were enrolled in college (41.6 vs.43.1 percent respectively). Twenty years earlier enrollment rates were lower for both groups (34.7 vs. 26.7 percent) and women were much less likely than men to continue their education in college.

Table E. **Persons 18 to 24 Years Old by High School Graduate Status, College Enrollment, Sex, Race and Hispanic Origin: 1994, 1984, and 1974**

[Numbers in thousands]

Race and year	All persons	Percent		Percent of highschool graduates enrolled in college		
		High school graduates	Dropouts	Total	Male	Female
All races						
1994	25,254	81.5	13.3	42.4	41.6	43.1
1984	28,031	81.6	14.8	33.2	36.0	30.6
1974	25,670	80.7	15.9	30.5	34.7	26.7
White						
1994	20,171	82.6	12.7	42.7	41.7	43.7
1984	23,347	83.0	14.1	33.7	36.4	31.1
1974	22,141	82.7	14.5	30.5	34.6	26.8
Black						
1994	3,661	77.0	15.5	35.5	34.5	36.4
1984	3,862	74.7	18.4	27.2	28.9	26.0
1974	3,105	67.1	25.1	26.6	30.5	23.7
Hispanic origin						
1994	3,523	56.6	34.7	33.2	30.6	36.0
1984	2,018	60.1	34.2	29.9	28.1	31.3
1974	1,506	55.9	37.1	32.3	36.2	28.6

Note: Persons of Hispanic origin may be of any race.

Table F. College Enrollment by Ethnicity: 1994 and 1974

[Numbers in thousands]

Year, race, and ethnicity	Persons 18 to 24 years old		Total college enrollment
	All persons	Enrolled college	
1994			
Number	25,254	8,729	15,022
Percent	100.0	100.0	100.0
White-nonHispanic	65.9	74.0	73.5
Black	14.5	11.5	12.0
Hispanic origin	14.0	7.6	7.9
Other	5.6	7.0	6.7
1974			
Number	25,670	6,316	9,852
Percent	100.0	100.0	100.0
White-nonHispanic	80.4	84.2	84.6
Black	12.1	8.8	9.4
Hispanic origin	5.9	4.3	3.6
Other	1.7	2.7	2.4

Note: White-nonHispanic was derived by subtracting Hispanic origin from White.

In the twenty-year period, college enrollment rates increased for both genders and both races. However, while the difference in enrollment rates between women and men disappeared, the difference between races remained (Table E). In 1994, 42.7 percent of White high school graduates and 35.5 percent of Black high school graduates were enrolled in college. For the Hispanic origin population, there has not been significant change (33.2 percent in 1994).

College Enrollment

In October 1994, 15.0 million persons were enrolled in colleges across the nation; this was statistically different from the 13.9 million who were enrolled in the fall of 1993. A significant portion (up to half) of the increase, particularly for students under 25 years old, can be attributed to the revision in population estimates based on the 1990 census to take account of the undercount (Table I). The transition to estimates based on the adjusted 1990 census did not affect enrollment figures for older students, but part of the approximately 562,000 student increase may be attributed to improved interviewing techniques.

While the "traditional" college age population (persons ages 18 to 24) has declined since the early 1980's (with a total decline of 3.7 million between 1980 and 1994), the total number of college students rose by 3.6 million, largely reflecting the increase in college enrollment by persons ages 25 and older.

Although the college enrollment rates of the White nonHispanic population of traditional college age has remained higher than for other groups (table A-5), the proportion of all college students who are minorities (not White nonHispanic) increased from 15.4 percent to 26.5 percent between 1974 and 1994 (Table F). This result reflects the increased proportion of the college age population that is minority, from 19.6 percent to 34.1 percent of 18-to 24-year-olds. About half of the increase in college enrollment has been among minorities.

Figure 3 and Table G detail some of the basic characteristics of college students in 1994, illustrating the diverse nature of this population. About 40.9 percent of all college students were age 25 or older, including 33.1 percent of undergraduates and 77.8 percent of graduate students. In 1974, students 35 years old and above were just 10.4 percent of all college students; by 1994 they represented 18.1 percent.

Women accounted for 55 percent of all college students in 1994, continuing the majority role they have occupied since 1979. Just twenty years ago, women constituted only 45.2 percent of all college students. The age and gender data in Table A-6 illustrate the fact that much of the older student enrollment is also enrollment by women. In 1994, among students 35 and over, 64.8 percent were women, compared with 53.4 percent in 1974. Among all college students, women were more likely than men to be enrolled in two-year colleges, and to be enrolled part time.

Finally, 62.9 percent of all college students were employed either full- or part-time. With 12.4 million students enrolled at the undergraduate level, 66.1 percent were enrolled in four-year institutions. The majority of students (63.7 percent) were enrolled full-time, and 77.8 percent were enrolled in a public college or university.

For many persons, college enrollment must be negotiated not only with respect to financial cost, but among many life-cycle factors as well, such as marriage, building a family, and establishing a career. Table H shows the proportion of students attending full-time at two-year and four-year institutions, by the age of the student. In general, a much larger proportion of students at four-year schools attend full-time, but there is also a strong relationship between age and full-time attendance. While 88.6 percent of traditional age college students in four-year schools are attending full-time, just 28.8 percent of persons age 35 or older in two-year schools are full-time students.

Enrollment Figures Affected by Change in Census Base and Change in Survey Instrument.

Two changes occurred between the 1993 and 1994 data collections that may affect comparability of the data —changing the survey weights to be based on the 1990 census, including an adjustment for undercount, rather than on the 1980 census, as enumerated, (used from 1981 to 1993), and moving from a paper and pencil

Figure 3.
College Enrollment by Age and Type of College: 1994

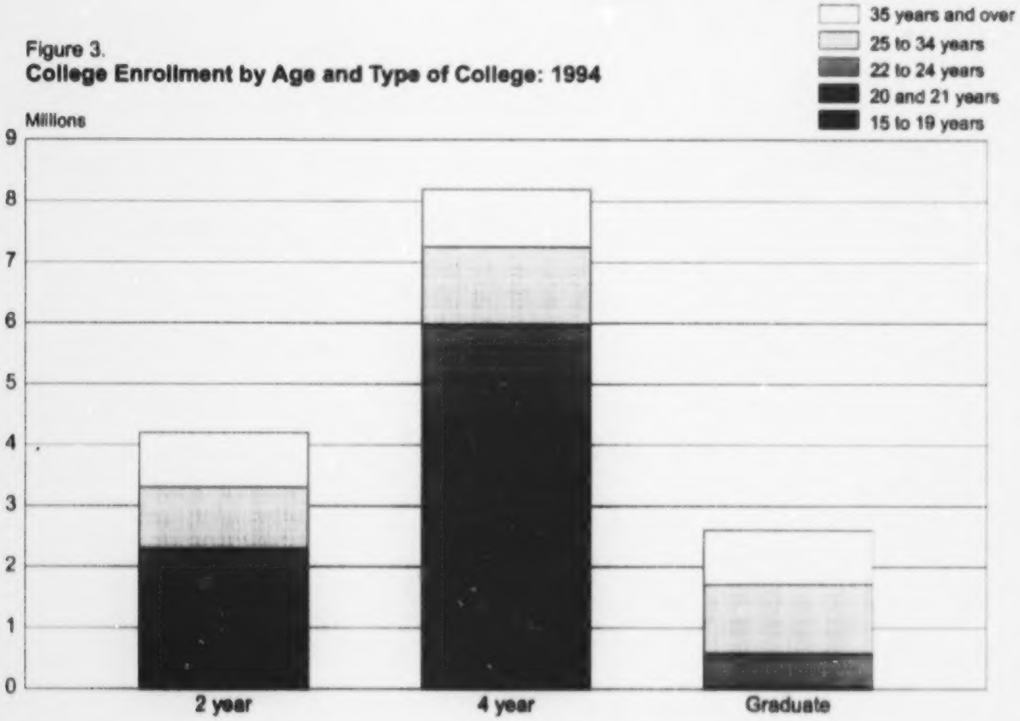


Table G. **Characteristics of the College Population: October 1994**

[Number in thousands]

Characteristics	Total population	Enrolled in college	Type of college			Percent enrolled full-time	Percent in public school	Percent employed		
			2 year college	4 year college	Graduate school			Total	Full-time	Part-time
Total	201,148	15,022	4,208	8,202	2,612	63.7	77.8	62.9	32.4	30.4

Hispanic origin	18,751	1,187	474	578	136	53.9	85.8	65.3	33.7	31.6
15 to 19 years old	17,971	3,201	1,063	2,130	9	89.1	77.8	45.5	8.2	37.3
20 and 21 years old	6,981	3,028	623	2,383	21	86.0	75.9	56.7	13.4	43.3
22 to 24 years old	11,327	2,650	621	1,478	551	69.1	78.8	65.7	29.2	36.5
25 to 34 years old	41,117	3,419	1,011	1,270	1,138	44.6	77.7	71.8	52.3	19.5
35 years old and over	123,752	2,725	890	942	893	27.9	79.2	76.1	60.2	15.9

Note: Persons of Hispanic origin may be of any race.

survey to a computer assisted survey. The new interviewing mode allowed for fewer errors by interviewers, improved questionnaire completion, and it probably enhanced the quality of the data. The differences between 1993 and 1994 enrollment figures reflect the more recent census base, the new instrument, and real change.

Table I shows 1994 and 1993 data as reported, and 1993 data that were retabulated using the new 1990 census based population controls used in inflating ("weighting") the survey results to national totals. These "bridge data" illustrate the impact of the introduction of the new weights on enrollment estimates. Columns 4 and 6 show change in reported data for 1993 and 1994. Columns 5 and 7 eliminate the effect due to revisions in census-based estimates and show change due to instrument change and real change.

Table H. Full-time Enrollment by Age and Type of College: October 1994

[Numbers in thousands]

Age	All colleges		2-year college		4-year college		Graduate school	
	Total students	Percent full-time	Total students	Percent full-time	Total students	Percent full-time	Total students	Percent full-time

Hispanic	1,187	1,169	995	192	18	19.3	1.5

Note: Columns designated 1993r contain data collected in October 1993, reprocessed using 1990 census based weights, including adjustment for undercount.

Table I reveals that the shift to controls based on the 1990 census and adjustment caused a substantial increase in the population under age 25, which, in turn, is reflected in increased enrollment in elementary school, high school, and college.

The increased specificity of the basic enrollment question for 3-to-5-year-olds on the computer assisted questionnaire may have contributed to the largest single-year change for that question in the history of this survey. Reported nursery school enrollment increased 40 percent from 1993 to 1994. The enrollment rate of 3 and 4 year olds also increased significantly (from 40.4 percent enrolled to 47.3 percent). Beginning in 1994 (on the computer assisted questionnaire), the question for children 3 to 5 years old was "Is ...attending or enrolled in nursery school, kindergarten or elementary school?" In the surveys conducted before 1994, the question for all children 3 to 14 years old was "Is ... attending or enrolled in school?" The interviewer could explain that school includes nursery school, kindergarten, elementary school, and high school, but that information was not on the questionnaire. The 1994 question for older children was the same as in earlier years.

A significant proportion of the increase in college enrollment was due to the change in population controls, primarily an increased number of students under 25 years old. The remainder was due to an increased enrollment rate among older students, which may have been influenced by improved questioning of older persons in the computer assisted interview, but such an effect cannot be quantified.

DATA FILES AVAILABLE

The time series tabulations of enrollment shown in tables A1 through A7 in appendix A are now available on floppy disk for $20 from the Statistical Information Office, Population Division, U.S. Bureau of the Census, Washington, DC 20233 (301-457-2422).

The package is also available on the INTERNET (www.census.gov). Click on "Subjects A to Z," then "School Enrollment" for a table of contents listing historical tables and recent data. Tables may be transferred from the Census Bureau FTP area.

[r] Revised

[1] Data are for Black and other races.
[2] Data are adjusted to include Black only.
[3] Persons of Hispanic origin may be of any race.

Note: Data for 1947 to 1953 exclude kindergarten. Nursery school was first collected in 1964. 1986 data are shown for the old and new processing system. Improvements in edits and population estimation procedure caused slight changes in the estimates.

1972	728	394	88	54.1	12.1	22.3	228	39.6	402	23.6	31.1

Note: Data for 1980 thru 1993 use 1980 Census-based estimates. Data for 1994 and 1993[r] use 1990 Census-based estimates.

The change in the educational attainment question and the college completion categories from "4 or more years of college, to "at least some college," in 1992 caused an increase in the proportion of 14-to-24-year-old high school graduates enrolled in college or completed some college, of approximately 5 percentage points. High school graduates are persons who have completed 4 years of high school or more, for 1967 to 1991. Beginning in 1992, they were persons whose highest degree was a high school diploma (including equivalency) or higher.

[r] Revised.

[1] Persons of Hispanic origin may be of any race.

Table A-6. **Age Distribution of College Students 14 Years Old and Over, by Sex: October 1947 to 1994**

[Numbers in thousands. Civilian noninstitutional population. For meaning of symbols, see text]

Appendix B.
Definitions and Explanations

Population coverage. The figures in this report for October 1994 are sample survey data and related to the civilian noninstitutional population of the 50 States and the District of Columbia. The estimation procedure used for this survey involves the inflation of the weighted sample results to independent estimates of the civilian noninstitutional population of the United States by age, sex, race, and Hispanic origin. These independent estimates are based on civilian noninstitutional population counts from the decennial censuses and are updated with statistics on births, deaths, immigration, and emigration and statistics on the strength of the Armed Forces. Data published for 1972 through 1980 were based on independent population estimates derived by updating the 1970 decennial census counts. Data published for 1981 to 1993 were based on independent population estimates derived by updating the 1980 decennial census counts. Starting with the data collected in the October 1994 Current Population Survey (CPS), independent estimates were based on civilian noninstitutional population controls for age, race, and sex established by the 1990 decennial census and adjusted for undercount of about 1.6 percent.

School enrollment. The school enrollment statistics from the current survey are based on replies to the interviewer's inquiry whether the person was enrolled in regular school. Interviewers were instructed to count as enrolled anyone who had been enrolled at any time during the current term or school year in any type of public, parochial, or other private school in the regular school system. Such schools include nursery schools, kindergartens, elementary schools, high schools, colleges, universities, and professional schools. Attendance may be on either a full-time, or part-time basis and during the day or night. Regular schooling is that which may advance a person toward an elementary or high school diploma, a college, university, or professional school degree. Children enrolled in nursery schools and kindergarten are included in the enrollment figures for regular schools and are also shown separately.

Enrollment in schools which are not in the regular school system, such as trade schools, business colleges, and schools for the mentally handicapped, which do not advance students to regular school degrees, is not included.

Persons enrolled in classes which do not require physical presence in school, such as correspondence courses or other courses of independent study, and in training courses given directly on the job, are also excluded from the count of those enrolled in school, unless such courses are being counted for credit at a regular school.

Level of school. The statistics on level of school indicate the number of persons enrolled at each of five levels—nursery school, kindergarten, elementary school (1st to 8th grades), high school (9th to 12th grades), and college or professional school. The last group includes graduate students in colleges or universities. Persons enrolled in elementary, middle school, intermediate school or junior high school through the eighth grade are classified as in elementary school. All persons enrolled in 9th through 12th grade are classified as in high school.

Nursery school. A nursery school is defined as a group or class that is organized to provide educational experiences for children during the year or years preceding kindergarten. It includes instruction as an important and integral phase of its program of child care. Private homes in which essentially custodial care is provided are not considered nursery schools. Children attending nursery school are classified as attending during either part of the day or the full day. Part-day attendance refers to those who attend either in the morning or in the afternoon, but not both. Full-day attendance refers to those who attend in both the morning and the afternoon.

Head Start. Children enrolled in Head Start programs or similar programs sponsored by local agencies to provide preschool education to young children are counted under nursery school.

Public or private school. In this report, a public school is defined as any educational institution operated by publicly elected or appointed school officials and supported by public funds. Private schools include educational institutions established and operated by religious bodies, as well as those which are under other private control. In cases where enrollment was in a school or college which was both publicly and privately controlled or supported, enrollment was counted according to whether it was primarily public or private.

Modal grade. Enrolled persons are classified according to their relative progress in school: that is, whether the grade or year in which they were enrolled was below, at, or above the modal (or typical) grade for persons of their age at the time of the survey. The modal grade is the year of school in which the largest proportion of students of a given age is enrolled.

Basic School Enrollment Supplement

(Questions included in the October CPS since 1967)
* = added since 1987 (year)

1. Is ... attending or enrolled in regular school? (Regular school includes elementary school, high school and schooling that leads to a college or professional school degree)
    <1> Yes
    <2> No (Go to 6)

2. Is ... enrolled in public or private school?
    <1> Public
    <2> Private

3. What grade or year is ... attending?

    <1-12> Grades 1 through 12 - elementary through high school (Skip to 7)
    <21> 1st year of college (freshman)
    <22> 2nd year of college (sophomore)
    <23> 3rd year of college (junior)
    <24> 4th year of college (senior)
    <25> 1st year of graduate school
    <26> 2nd year or higher of graduate school
    <30> College, no year reported

4. Is ... attending college full-time or part-time?
    <1> Full-time
    <2> Part-time

5. Is this a 2-year or a 4-year college or university?
    <1> 2-year college (community or junior college)
    <2> 4-year college or university

*6. Excluding (regular college courses and) on the job training, is ... taking any business, vocational, technical, secretarial, trade, or correspondence courses? (1987)
    <1> Yes
    <2> No

7. Was ... attending or enrolled in a regular school or college in October 1993, that is, October of last year?
    <1> Yes
    <2> No (Skip to 9)

*8. What grade or year was ... attending last year? (1989)

    <1-12> Grades 1 through 12 elementary through high school
    <21> 1st year of college (freshman)
    <22> 2nd year of college (sophomore)
    <23> 3rd year of college (junior)
    <24> 4th year of college (senior)
    <25> 1st year of graduate school
    <26> 2nd year or higher of graduate school
    <30> College, no year reported

9. INTERNAL CHECK ITEM A
    ENROLLED GRADE = 1-12 (End questions)
    All others
    AGE = 15-29 (15-24 through 1992)
        College graduate (Skip to 11)
        High school graduate (Skip to 12)
        Not High school graduate (Ask 10)
    AGE = 30+ (End questions)

10. In what calendar year did ... last attend regular school?
    <1> 1994
    <2> 1993 or before
    <3> Never attended
    --(Skip to 13)--

*11. In what calendar year did ... receive his/her most recent degree? (1993)
    <1> 1994
    <2> 1993 or before

12. In what calendar year did ... complete high school?
    <1> 1994
    <2> 1993 or before

*13. Did ... complete high school by means of an equivalency test, such as the GED? (1988)
    <1> Yes
    <2> No

School Enrollment Supplement-Children's Items

1. Age = 0-2 (Go to next child)
    3-5 (Ask 2) (Ask 3 through 1993)
    6-14 (Skip to 3)

*2. Is ... attending or enrolled in nursery school, kindergarten or elementary school? (1994)
    <1> Yes (Skip to 4)
    <2> No (End questions)

3. Is ...attending or enrolled in regular school?
    (Regular school includes nursery school, kindergarten, elementary school and schooling which leads to a high school diploma or college degree.)
    <1> Yes (Ask 4)
    <2> No (End questions)

4. Is ... enrolled in public or private school?
    <1> Public
    <2> Private

5. What grade or year is ... attending?
    (If nursery school or kindergarten, ask if full-day or part-day)

    <A> Nursery (preschool, pre-kindergarten) full-day
    <B> Nursery (preschool, pre-kindergarten) part-day
    <C> Kindergarten full-day
    <D> Kindergarten part-day
    <1-8> Grades 1 through 8 - Elementary
    <9-12> Grades 9 through 12 - High school

Annual High School Dropout Rate. The annual high school dropout rate is an estimate of the proportion of students who drop out of school in a single year. Table A-4 presents estimates of the annual dropout rate for various groups since 1967. This section briefly explains

BEST COPY AVAILABLE

how the annual dropout rate is calculated; for further explanation and details of its derivation see CPR Series P-20, No. 413, School Enrollment—Social and Economic Characteristics of Students: October 1983.

Annual dropout rates for a single grade(x) are estimated as the ratio of the number of persons who were enrolled in grade(x) in the year preceding the survey, did not complete grade(x) and are not currently enrolled, to the number enrolled in grade(x) at the start of the year preceding this survey. Persons reported as enrolled last year but not currently enrolled are presented in table 8 by the highest grade completed and are presumed to have dropped out of the succeeding grade (except those who graduated this year). Thus, individuals counted as 10th grade dropouts are those not enrolled in school whose highest grade completed is the 9th grade. (They include not only those persons who were enrolled in the 10th grade in the fall of the year preceding the survey and left school without completing the year, but also those persons who finished the 9th grade in the spring preceding the survey and were not enrolled at the survey date.) These estimates form the numerator of estimates of the annual grade specific dropout rate.

Persons currently enrolled in high school are presumed to have successfully completed and been enrolled in the preceding grade in the preceding year. Thus, those who have successfully completed the 10th grade are enrolled in the 11th grade. Along with the persons who dropped out of that grade, they comprise the denominator of the estimate of the annual grade-specific dropout rate.

$$\text{Dropout from grade } n = \frac{\text{Not enrolled and highest grade completed} = n\text{-}1}{\text{Enrolled in grade } n{+}1 + \text{Not enrolled and highest grade completed} = n\text{-}1}$$

Since persons who complete the 12th grade cannot be presumed to enroll in college, the estimate of the number of persons enrolled in the 12th grade one year prior to the survey is constructed as the sum of the number of persons reported as having graduated from high school "this year" in table 8 (both those enrolled in the first year of college and persons not currently enrolled whose highest grade completed is the 12th grade) and those persons not currently enrolled who were enrolled last year and whose highest grade completed is the 11th grade (dropouts).

The annual dropout rate for all grades during one year can be obtained by summing the components of the rates for the individual grades. In other words, those persons who were enrolled in the tenth, eleventh, or twelfth grade last year and who are not currently enrolled and do not have a diploma. The following chart shows the components of the annual dropout rate calculation for each grade.

Dropped out of grade	Numerator	Denominator	
	Not currently enrolled and highest grade =	Current grade in which enrolled =	Not currently enrolled and highest grade =
10	9	11	9
11	10	12	10
12	11	College 1 + (not enrolled, completed 12 and graduated this year)	11

In addition to the annual rate, two other estimates of dropouts are frequently used. The annual dropout rate is different from a "pool" (or status) measure such as the proportion of an age group who are high school dropouts (not enrolled in school, not high school graduates, shown in table 1), which does not depend on when the individuals dropped out.

A third measure of dropouts is the cohort measure, most commonly from a longitudinal study, in which one calculates the proportion of a specific group of people enrolled in a specific year, who had not received diplomas (and who were no longer in school) some years later. For example, the proportion of a cohort enrolled in ninth grade in year X, who were not enrolled and had not received a diploma by year X+4.

College enrollment. The college enrollment statistics are based on replies to the interviewer's inquiry as to whether the person was attending or enrolled in college. Interviewers were instructed to count as enrolled anyone who had been enrolled at any time during the current term or school year, except those who have left for the remainder of the term. Thus, regular college enrollment includes those persons attending a 4-year or 2-year college, university, or professional school (such as medical or law school) in courses that may advance the student toward a recognized college or university degree (e.g., BA or MA). Attendance may be either full time or part time, during the day or night. The college student need not be working toward a degree, but he/she must be enrolled in a class for which credit would be applied toward a degree. (see "school enrollment")

Two-year and four-year colleges. College students were asked to report whether the college in which they were enrolled was a 2-year college (junior or community college) or a 4-year college or university. Students enrolled in the first 4 years were classified by the type of college they reported. Type of college is shown in tables for undergraduates only. Graduate students are shown as a separate group.

Revisions in processing and tabulations have resulted in data not strictly comparable to that published for earlier years. In tabulations for years prior to 1987, students in the fourth academic year of college were assumed to be in a 4-year college or university regardless of the type of college they reported (74,000 fourth-year students were reported enrolled in 2-year colleges in 1986 on the questionnaire but included in 4-year colleges in the tabulations). Also before 1987, type of college was not allocated for students who did not report (about 250,000 students in the first to third year in 1986). Revised edit and allocation procedures for 1987 and 1988 increased the estimated number of college students, which also increased the numbers of persons reported in 2-year and 4-year colleges. The following table shows data for 1986 using both the revised and old processing and tabulation systems. The differences are due to procedural changes rather than real change:

Undergraduates (X 1000)	Revised	Old	Difference
14 to 34 years old	9,098	8,972	126
2-year college	3,087	2,831	256
4-year college	6,011	5,892	119
Type not reported	000	249	-249

Full-time and part-time attendance. College students were classified, in this report, according to whether they were attending school on a full-time or part-time basis. A student was regarded as attending college full time if he/she was taking 12 or more hours of classes during the average school week, and part time if he/she was taking less than 12 hours of classes during the average school week.

School enrollment in year preceding current survey. An inquiry on enrollment in regular school or college in October of the preceding year was asked for all persons (enrolled and not enrolled). In years before 1988, the question was asked only of persons who were not currently attending regular school or were enrolled in college. In the tabulations of persons enrolled in secondary school in the previous year, persons currently enrolled in high school are assumed to have been enrolled the previous year.

Vocational school enrollment. Vocational school enrollment includes enrollment in business, vocational, technical, secretarial, trade, or correspondence courses which are not counted as regular school enrollment and are not for recreation or adult education classes. Courses counted as college enrollment should not also be included as vocational.

Comparability of enrollment data in previous years. Changes in the edit and tabulation packages used in processing the October CPS school enrollment supplement have caused some minor revisions in the estimates. The current edit and tabulation package began with 1987 data. The 1986 data which were published in CPR series P-20 No. 429, were reprocessed with the rewritten programs in order to clarify comparability. Tables A-1 to A-7 contain enrollment data in time series.In earlier editions of this report, in each table, there were two presentations for 1986. In this publication only the revised 1986 data are shown in tables A-1 to A-7.

Major changes in the data due to the 1987 edit revisions are:

a. Among 14- and 15-year-olds, an edit improvement allowed persons with enrollment data not reported who were previously automatically imputed "not enrolled" to be enrolled.

b. Revisions in tabulation of enrollment in the previous year simplifies calculation of an annual high school dropout rate.

c. Edit improvements caused increases in college enrollment estimates, most notably above age 24; this age group was largely ignored in earlier edits.

d. Type of college is fully allocated (discussed earlier).

e. Tabulations of type of college are available by race.

f. Dependent family member is defined consistently.

g. New data on employment status, vocational course enrollment, college retention and re-entry, and families with children enrolled in public and private school are available.

In the series of reports on school enrollment for 1987 to 1992, race and Hispanic origin were erroneously tabulated for a small percentage of children 3 to 14 years old. Race and Hispanic origin of an adult in the household were attributed to the child, rather than using the child's reported characteristics. In the vast majority of cases these characteristics were the same for family members, but for a small percentage of children, they were different. The correction made the following proportional changes in the numbers of children in each group: White (-0.5 percent), Black (+3.1 percent), Hispanic origin (-4.6 percent).

Tables A-1 to A-7 show two sets of data for 1993. The data labeled 1993^r were processed using population controls based on the 1990 census, adjusted for undercount. Compared with the data labeled 1993, which used population controls based on the 1980 census, it shows the affect of the change in population controls.

The change in 1994 from a paper and pencil survey to a computer assisted survey had some affect on the data. Most notably the enrollment question for children 3 to 5 years old was different from the question for older children—it included a reference to nursery school. In 1994 reported nursery school enrollment was significantly higher than in earlier years.

Age. The age classification is based on the age of the person at his/her last birthday.

Race. The population is divided into three groups on the basis of race—White, Black, and other races. The last category includes American Indians, Japanese, Chinese, other Asian and Pacific Islanders, and any other race except White and Black. In this report, other races is not shown separately.

Hispanic origin. Information on origin or descent was obtained by asking, "What is (this person's) origin or descent?" Responses generally refer to a person's perceived national or ethnic lineage and do not necessarily indicate the country of his/her birth or that of his/her parents.

Persons of Hispanic origin are persons who reported themselves as Mexican American, Chicano, Mexican, Mexicano, Puerto Rican, Cuban, Central or South American, or other Hispanic origin. However, all persons who reported themselves as Mexican American, Chicano, Mexican, or Mexicano were combined into the one category—Mexican. Persons of Hispanic origin may be of any race.

Marital status. The marital status category shown in this report, "married, spouse present," includes persons who are currently married and living with their spouse. The category "never married" is self-explanatory. The category "other marital status" includes persons who are separated, divorced, or widowed.

Household. A household consists of all the persons who occupy a housing unit. A house, an apartment or other group of rooms, or a single room, is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters; that is, when the occupants do not live and eat with any other persons in the structure and there is direct access from the outside or through a common hall.

A household includes the related family members and all the unrelated persons, if any, such as lodgers, foster children, wards, or employees who share the housing unit. A person living alone in a housing unit, or a group of unrelated persons sharing a housing unit as partners, is also counted as a household. The count of households excludes group quarters.

Family. A family (also referred to in this publication as a primary family) is a group of two persons or more (one of whom is the householder), related by birth, marriage, or adoption and residing together; all such persons are considered members of one family.

Householder. The householder refers to the person (or one of the persons) in whose name the housing unit is owned or rented (maintained) or, if there is no such person, any adult member, excluding roomers, boarders, or paid employees. If the house is owned or rented jointly by a married couple, the householder may be either the husband or the wife. The person designated as the householder is the "reference person" to whom the relationship of all other household members, if any, is recorded.

Prior to 1980, the husband was always considered the householder in married-couple households. The number of householders is equal to the number of households. Also, the number of family householders is equal to the number of families.

Family householder. The family member who is also the householder (the person or one of the persons who maintain the household), or reference person, is the family householder.

Head versus householder. Beginning with the 1980 census, the Bureau of the Census discontinued the use of the terms "head of household" and "head of family." Instead, the terms "householder" and "family householder" were used. Recent social changes resulted in greater sharing of household responsibilities among the adult members and, therefore, made the term "head" inappropriate in the analysis of household and family data. Specifically, the Bureau reconsidered its longtime practice of always classifying the husband as the reference person (head) when he and his wife are living together.

In this report, the term "householder" is used in the presentation of data that had previously been presented with the designation "head." The householder is the first adult household member listed on the questionnaire. The instructions call for listing first the person (or one of the persons) in whose name the home is owned or rented. If a home is owned jointly by a married couple, either the husband or the wife may be listed first, thereby becoming the reference person, or householder, to whom the relationship of other household members is to be recorded.

The practice of using the term "head of family" or "family head", to refer to the person maintaining the household, was discontinued in CPS surveys conducted after the 1980 Census of Population. In surveys taken prior to the 1980 Census of Population, husbands in husband-wife families were always classified as "family heads." Women were only "family heads" if no spouse was present. The person who maintains the household is now called the "family householder."

Dependent family member. In theory, a dependent family member is one who is financially dependent on the householder. In these data a dependent family member is a primary family member, under 25 years old, who is an own child, brother/sister, or other relative (not parent) of the householder, and is not "married, spouse present."

In analyses of data on college enrollment by family income for earlier years, persons who were primary family members, 18 to 24 years old, and not "married, spouse present" were often treated as dependent family members, although not labelled as such and including some householders (e.g. "other marital status" in table 13 of CPR Series P-20, No. 429.) The family income reported for dependent family members is presumed to be that of the parental family; for others, it is presumed to be that of the individual and his/her spouse. In table 15, persons labeled "dependent family member" and "other marital and family status" combined are equivalent to persons labeled "other marital status" in table 13 of CPR Series P-20, No. 429. Persons who are "other marital and family status" in this report are the family householders who are not "married, spouse present."

Educational Attainment. Data on educational attainment are derived from a single question that asks, "What is the highest level of school ... has completed, or the highest degree ... has received?" Levels of completion beyond a high school degree are identified with specific categories, such as associate, bachelors and masters, for example.The question on educational attainment applies only to progress in "regular" schools. Such schools include public, private and parochial elementary and high schools (both junior and senior), colleges, universities and professional schools (whether day or night schools). Thus, regular schooling is that which may advance a person toward an elementary school certificate, a high school diploma, or a college, university, or professional school degree. Schooling in other than regular schools is counted only if the credits obtained are regarded as transferable to schools in the regular school system.

The single educational attainment question now in use was introduced in the CPS beginning January 1992, and is similar to that used in the 1990 Decennial Census of Population and Housing. Consequently, data on educational attainment from the 1994 CPS are not directly comparable to CPS data from years prior to 1992. The new question replaces the previous two-part question used in the CPS that asked respondents to report the highest grade they had attended, and whether or not they had completed that grade.

Labor force status.

In the labor force. The definition of labor force and employment status relates to the population 15 years old and over. Persons are classified as in the labor force if they were employed as civilians, unemployed, or in the Armed Forces during the survey week. Data tabulated from the October CPS are for the civilian population only.

Not in the labor force. All civilians who are not classified as employed or unemployed are defined as "not in the labor force."

Employed. Employed persons comprise (1) all civilians who, during the survey week containing October 12, did any work at all as paid employees or in their own business or profession, on their own farm, or in a business operated by a member of the family and (2) all those who were not working but who had jobs or businesses from which they were temporarily absent because of illness, bad weather, vacation, or labor-management dispute, or because they were taking time off for personal reasons, whether or not they were paid by their employers for time off, and whether or not they were seeking other jobs. Excluded from the employed group are persons whose only activity consisted of work around the house (such as own home housework and painting or repairing own home) or volunteer work for religious, charitable, and similar organizations

Unemployed. Unemployed persons are those civilians who, during the survey week had no employment but were available for work and (1) had engaged in any specific job seeking activity within the past 4 weeks, such as registering at a public or private employment office, meeting with prospective employers, checking with friends or relatives, placing or answering advertisements, writing letters of application, or being on a union or professional register; (2) were waiting to be called back to a job from which they had been laid off, or (3) were waiting to report to a new wage or salary job within 30 days.

Full-time and part-time employment. Persons who worked 35 hours or more during the survey week and those who worked 1 to 34 hours but usually work full time are classified as employed full time. Part-time workers are persons who worked 1 to 34 hours during the survey week and usually work only 1 to 34 hours. Persons with a job but not at work during the survey week are classified according to whether they usually work full time or part time.

Family Income. In this report, family income is derived from a single question asked of the household respondent when a household first enters the sample and is updated on the 1-year anniversary of entry. Income includes money income from jobs; net income from business, farm, or rent; pensions; dividends; interest; social security payments; and any other money income. The income of nonrelatives living in the household is excluded, but the income of all family members 14 years old and over, including those temporarily living away, is included. It should be noted that while characteristics of the person, such as age and marital status, and the composition of families refer to the date of the interview, family income statistics refer to receipts over a 12-month period starting 12 to 16 months prior to the interview.

The income tables include in the lowest income group those who were classified as having no income in the 12-month reference period and those reporting a loss in net income from farm and nonfarm self-employment or in rental income.

The detailed income tables include a separate category ("not reported") for families for which no income information was obtained. In most other CPS's showing income data, the missing income data have been allocated.

The money income level of families shown in this report may be somewhat understated. Income data from the October control card are based on the respondent's estimate of total family money income in broad, fixed income intervals. Income data collected in the March supplement to the CPS are based on responses to 11 direct questions asked about each person 15 years old and over and identifying 23 different sources of income in the preceding calendar year. Previous research has shown that the use of broad income intervals to record money income tends to reduce the rate of nonresponse, while increasing the likelihood that the amounts reported will be significantly understated as compared with results from more detailed questions.

Metropolitan-nonmetropolitan residence. The population residing in metropolitan statistical areas (MSA's) constitutes the metropolitan population. MSA's are defined by the Office of Management and Budget for use in the presentation of statistics by agencies of the Federal Government. An MSA is a geographic area consisting of a large population nucleus, together with adjacent communities which have a high degree of economic and social integration with that nucleus. The definitions specify a boundary around each large city so as to include most or all its suburbs. Entire counties form the MSA building blocks, except in New England where cities and towns are used. The former term, SMSA, was changed to MSA in 1983.

An area qualifies for recognition as an MSA if (1) it includes a city of at least 50,000 population, or (2) it includes a Census Bureau-defined urbanized area of at least 50,000 with a total metropolitan population of at least 100,000 (75,000 in New England). In addition to the county containing the main city or urbanized area, an MSA may include other counties having strong commuting ties to the central county. If specified conditions are met, certain large MSA's are designated as consolidated MSA's (CMSA's) and divided into component primary MSA's (PMSA's).

Central cities. The largest city in each MSA is always designated a central city. There may be additional central cities if specified requirements, designed to identify places of central character within the MSA, are met. Although the largest central cities are generally included in the title of the MSA, there may be central cities that are not part of the title. The balance of the MSA outside the central city or cities often is regarded as equivalent to "suburbs."

In July 1985, the CPS began carrying the metropolitan statistical area definitions announced by the Office of Management and Budget on June 30, 1984. Figures published from the CPS in the early 1980's and throughout most of the 1970's referred to metropolitan areas as defined on the basis of the 1970 census. Since there are important differences in the population classified as metropolitan using the 1970 and 1984 definitions, comparisons should be avoided.

Comparability of metropolitan estimates. A redesigned CPS sample based on the 1990 census began phase-in in April 1994 and was completed in July 1995. During the phase-in, when part of the sample was based on the 1980 census and part was based on the 1990 census, estimates by metropolitan status had limited reliability. Estimates for 1994 by metropolitan status should be used cautiously or not at all. Although estimates in this report were based on population controls derived from the 1990 census, metropolitan definitions were based on the 1980 census, since phase-in of the new sample was in the early stages.

The recent CPS metropolitan estimates (since 1986) have consistently been higher than independent estimates of the metropolitan population prepared by the Census Bureau; the CPS nonmetropolitan estimates have been lower than the independent estimates. The apparent overestimation of metropolitan and underestimation of nonmetropolitan population in the CPS relative to the Bureau's independent estimates should be taken into account when using the data.

Geographic regions. The four major regions of the United States, for which data are presented, represent groups of States, as follows:

Northeast— Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, and Vermont.

Midwest[1]—Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, and Wisconsin.

South— Alabama, Arkansas, Delaware, District of Columbia, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, and West Virginia.

West— Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, and Wyoming.

Symbols. The following symbols are used throughout the tables:

-	Represents zero or rounds to zero.
B	The base of the derived figure is less than 75,000.
X	Not applicable
NA	Not available.

Rounding of estimates. Individual figures are rounded to the nearest thousand without being adjusted to group totals which are independently rounded. With few exceptions, percentages are based on the rounded absolute numbers.

Appendix C.
Source and Accuracy of Estimates

SOURCE OF DATA

Most estimates in this report come from data obtained in October 1994 from the Current Population Survey (CPS). Some estimates are based on data obtained from the CPS in earlier years. The Bureau of the Census conducts the survey every month, although this report uses only October data for its estimates. The October survey uses two sets of questions, the basic CPS and the supplement.

Basic CPS. The basic CPS collects primarily labor force data about the civilian noninstitutional population. Interviewers ask questions concerning labor force participation about each member 15 years old and over in every sample household.

The present CPS sample was selected from the 1980 Decennial Census files with coverage in all 50 states and the District of Columbia. The sample is continually updated to account for new residential construction. The United States was divided into 1,973 geographic areas. In most states, a geographic area consisted of a county or several contiguous counties. In some areas of New England and Hawaii, minor civil divisions are used instead of counties. A total of 729 geographic areas was selected for sample. About 60,000 occupied households are eligible for interview every month. Interviewers are unable to obtain interviews at about 2,600 of these units. This occurs when the occupants are not found at home after repeated calls or are unavailable for some other reason.

Since the introduction of the CPS, the Bureau of the Census has redesigned the CPS sample several times. These redesigns have improved the quality and accuracy of the data and have satisfied changing data needs. A redesigned CPS sample based on the 1990 census is currently being phased-in. The phase-in procedure started in April 1994 and will be completed in July 1995. In July 1995, there will be 792 geographic areas in sample.

Table C-1 summarizes changes in the CPS designs for the years for which data appear in this report.

October Supplement. In addition to the basic CPS questions, interviewers asked supplementary questions in October about school enrollment for all household members 3 years old and over.

Table C-1. **Description of the Current Population Survey**

Time Period	Number of sample areas	Housing units eligible	
		Inter-viewed	Not Inter-viewed
1994	[1]792/729	57,400	2,600
1990 to 1993	729	57,400	2,600
1988 to 1989	729	53,600	2,500
1985 to 1987	729	57,000	2,500
1984	[1]629/729	57,000	2,500
1981 to 1983	629	59,000	2,500
1980	629	65,500	3,000
1978 to 1979	614	55,000	3,000
1972 to 1977	461	46,500	2,500
1971	449	45,000	2,000
1967 to 1970	449	48,000	2,000
1963 to 1966	357	33,500	1,500
1960 to 1962	333	33,500	1,500
1957 to 1959	330	33,500	1,500
1954 to 1956	230	21,000	500-1,000
1947 to 1953	68	21,000	500-1,000

[1] The CPS was redesigned following the 1980 and 1990 Decennial Censuses of Population and Housing. During phase-in of the new design, housing units from the new and old designs were in the sample.

Estimation Procedure. This survey's estimation procedure inflates weighted sample results to independent estimates of the civilian noninstitutional population of the United States by age, sex, race, and Hispanic/non-Hispanic categories. The independent estimates were based on statistics from decennial censuses of population; an adjustment for undercoverage in the 1990 census; statistics on births, deaths, immigration and emigration; and statistics on the size of the Armed Forces. The independent population estimates used for 1994 were based on updates to controls established by the 1990 Decennial Census. Before 1994, independent population estimates from the 1980 or most recent decennial census were used. For more details on the change in independent estimates, see the section entitled "Introduction of 1990 Census Population Controls" in an earlier report (Series P60, No. 188).

The estimates in this report for 1985 and later also employ a revised survey weighting procedure for persons of Hispanic origin. In previous years, weighted sample results were inflated to independent estimates of the noninstitutional population by age, sex, and race. There was no specific control of the survey estimates for the Hispanic population. Since then, the Bureau of the Census developed independent population controls for the Hispanic population by sex and detailed age groups.

Revised weighting procedures incorporate these new controls. The independent population estimates include some, but not all, undocumented immigrants.

ACCURACY OF THE ESTIMATES

Since the CPS estimates come from a sample, they may differ from figures from a complete census using the same questionnaires, instructions, and enumerators. A sample survey estimate has two possible types of errors: sampling and nonsampling. The accuracy of an estimate depends on both types of errors, but the full extent of the nonsampling error is unknown. Consequently, one should be particularly careful when interpreting results based on a relatively small number of cases or on small differences between estimates. The standard errors for CPS estimates primarily indicate the magnitude of sampling error. They also partially measure the effect of some nonsampling errors in responses and enumeration, but do not measure systematic biases in the data. (Bias is the average over all possible samples of the differences between the sample estimates and the desired value.)

Nonsampling Variability. There are several sources of nonsampling errors including the following:

- Inabililty to get information about all sample cases.
- Definitional difficulties.
- Differences in interpretation of questions.
- Respondents' inability or unwillingness to provide correct information.
- Respondents' inability to recall information.
- Errors made in data collection, such as in recording and coding the data.
- Errors made in processing the data.
- Errors made in estimating values for missing data.
- Failure to represent all units with the sample (undercoverage).

CPS undercoverage results from missed housing units and missed persons within sample households. Compared with the level of the 1990 Decennial Census, overall CPS undercoverage is about 8 percent. CPS undercoverage varies with age, sex, and race. Generally, undercoverage is larger for males than for females and larger for Blacks and other races combined than for Whites. As described previously, ratio estimation to independent age-sex-race-Hispanic population controls partially corrects for the bias due to undercoverage. However, biases exist in the estimates to the extent that missed persons in missed households or missed persons in interviewed households have different characteristics from those of interviewed persons in the same age-sex-race-Hispanic group.

A common measure of survey coverage is the coverage ratio, the estimated population before ratio adjustment divided by the independent population control. Table C-2 shows CPS coverage ratios for age-sex-race groups for a typical month. The CPS coverage ratios can exhibit some variability from month to month, but these are a typical set of coverage ratios. Other Census Bureau household surveys experience similar coverage.

For additional information on nonsampling error including the possible impact on CPS data when known, refer to Statistical Policy Working Paper 3, *An Error Profile: Employment as Measured by the Current Population Survey*, Office of Federal Statistical Policy and Standards, U.S. Department of Commerce, 1978 and Technical Paper 40, *The Current Population Survey: Design and Methodology*, Bureau of the Census, U.S. Department of Commerce.

Comparability of Data. Data obtained from the CPS and other sources are not entirely comparable. This

Table C-2. **CPS Coverage Ratios**

Age	Non-Black		Black		All Persons		
	M	F	M	F	M	F	Total

0+	0.918	0.949	0.793	0.864	0.902	0.931	0.921

results from differences in interviewer training and experience and in differing survey processes. This is an example of nonsampling variability not reflected in the standard errors. Use caution when comparing results from different sources.

A number of changes were made in data collection and estimation procedures beginning with the January 1994 CPS. The major change was the use of a new questionnaire. The questionnaire was redesigned to measure the official labor force concepts more precisely, to expand the amount of data available, to implement several definitional changes, and to adapt to a computer-assisted interviewing environment. The supplemental questions were also modified for adaptation to computer-assisted interviewing, although there were no changes in definitions and concepts. Due to these and other changes, one should use caution when comparing estimates from data collected in 1994 and later years with estimates from earlier years.

Caution should also be used when comparing estimates in this report (which reflect 1990 census-based population controls) with estimates for 1993 and earlier years (which reflect 1980 census-based population controls). This change in population controls had relatively little impact on summary measures such as means, medians, and percentage distributions. It did have a significant impact on levels. For example, use of 1990 based population controls results in about a 1-percent increase in the civilian noninstitutional population and in the number of families and households. Thus, estimates of levels for data collected in 1994 and later years will differ from those for earlier years by more than what could be attributed to actual changes in the population. These differences could be disproportionately greater for certain subpopulation groups than for the total population.

Since no independent population control totals for persons of Hispanic origin were used before 1985, compare Hispanic estimates over time cautiously.

For more information on the introduction of the new questionnaire, the modernized data collection methods, and the introduction of new population controls based on the 1990 census, see "Revisions in the Current Population Survey Effective January 1994" in the February 1994 issue of Employment and Earnings published by the Bureau of Labor Statistics.

Note When Using Small Estimates. Summary measures (such as medians and percentage distributions) are shown only when the base is 75,000 or greater. Because of the large standard errors involved, summary measures would probably not reveal useful information when computed on a smaller base. However, estimated numbers are shown even though the relative standard errors of these numbers are larger than those for corresponding percentages. These smaller estimates permit combinations of the categories to suit data users' needs. These estimates may not be reliable for the interpretation of small differences. For instance, even a small amount of nonsampling error can cause a borderline difference to appear significant or not, thus distorting a seemingly valid hypothesis test.

Sampling Variability. Sampling variability is variation that occurred by chance because a sample was surveyed rather than the entire population. Standard errors, as calculated by methods described next, are primarily measures of sampling variability, although they may include some nonsampling errors.

Standard Errors and Their Use. A number of approximations are required to derive, at a moderate cost, standard errors applicable to all the estimates in this report. Instead of providing an individual standard error for each estimate, generalized sets of standard errors are provided for various types of characteristics. Thus, the tables show levels of magnitude of standard errors rather than the precise standard errors.

Tables C-3 and C-4 provide standard errors of estimated numbers. Table C-5 provides standard errors of estimated precentages. Table C-6 has standard error parameters for persons, families, households, householders, and unrelated individuals. Table C-6 also provides factors to apply to the standard errors in tables C-3 through C-5. Table C-7 has factors for years prior to 1994. Table C-8 has factors for regional data.

The sample estimate and its standard error enable one to construct a confidence interval. A confidence interval is a range that would include the average result of all possible samples with a known probability. For example, if all possible samples were surveyed under essentially the same general conditions and using the same sample design, and if an estimate and its standard error were calculated from each sample, then approximately 90 percent of the intervals from 1.645 standard errors below the estimate to 1.645 standard errors above the estimate would include the average result of all possible samples.

A particular confidence interval may or may not contain the average estimate derived from all possible samples. However, one can say with specified confidence that the interval includes the average estimate calculated from all possible samples.

Some statements in the report may contain estimates followed by a number in parentheses. This number can be added to and subtracted from the estimate to calculate upper and lower bounds of the 90-percent confidence interval. For example, if a statement contains the phrase "grew by 1.7 percent (±1.0)," the 90-percent confidence interval for the estimate, 1.7 percent, is 0.7 percent to 2.7 percent.

Standard errors may be used to perform hypothesis testing. This is a procedure for distinguishing between population characteristics using sample estimates. The most common type of hypothesis appearing in this report is that the population characteristics are different. An example of this would be comparing the percentage of 18 to 24 year olds enrolled in college in 1994 to those enrolled in 1984.

Tests may be performed at various levels of significance. The significance level of a test is the probability of concluding that the characteristics are different when, in fact, they are the same. All statements of comparison in the text have passed a hypothesis test at the 0.10 level of significance or better. This means that the absolute value of the estimated difference between characteristics is greater than or equal to 1.645 times the standard error of the difference.

Standard Errors of Estimated Numbers. There are two ways to compute the approximate standard error, s_x, of an estimated number shown in this report. The first uses the formula

$$s_x = fs \qquad (1)$$

where f is a factor from table C-6 and s is the standard error of the estimate obtained by interpolation from table C-3 or C-4. The second method uses formula (2), from which the standard errors in tables C-3 and C-4 were calculated. This formula will provide more accurate results than formula (1).

$$s_x = \sqrt{-(b/T)x^2 + bx} \qquad (2)$$

Here x is the size of the estimate, T is the total number of persons in a specific age group and b is the parameter in table C-6 associated with the particular type of characteristic. If T is not known, for Total or White use 100,000,000; for Blacks and Hispanic use 10,000,000. When calculating standard errors for numbers from cross-tabulations involving different characteristics, use the factor or set of parameters for the characteristic which will give the largest standard error.

Illustration. Table 1 shows there are 3,917,000 3 and 4 year olds enrolled in school and 8,284,000 children in that age group. Use the appropriate parameter from table C-6 and formula (2) to get

Number, x	3,917,000
Total, T	8,284,000
b parameter	2,944
Standard error	78,000
90% conf. int.	3,789,000 to 4,045,000

The standard error is calculated as

$$s_x = \sqrt{-\left(\frac{2,944}{8,284,000}\right) \times 3,917,000^2 + 2,944 \times 3,917,000} = 78,000$$

The 90-percent confidence interval is calculated as 3,917,000 ± 1.645 x 78,000.

A conclusion that the average estimate derived from all possible samples lies within a range computed in this way would be correct for roughly 90 percent of all possible samples.

The alternate calculation of the standard error, using formula (1) with f = 1.1 from table C-6 and s = 63,658 by interpolation from table C-3 is

$$s_x = 1.1 \times 57,871 = 63,658$$

Standard Errors of Estimated Percentages. The reliability of an estimated percentage, computed using sample data for both numerator and denominator, depends on the size of the percentage and its base. Estimated percentages are relatively more reliable than the corresponding estimates of the numerators of the percentages, particularly if the percentages are 50 percent or more. When the numerator and denominator of the percentage are in different categories, use the factor or parameter from table C-6 indicated by the numerator.

The approximate standard error, $s_{x,p}$, of an estimated percentage can be obtained by use of the formula

$$s_{x,p} = fs \qquad (3)$$

In this formula, f is the appropriate factor from table C-6, and s is the standard error of the estimate obtained by interpolation from table C-5.

Alternatively, formula (4) will provide more accurate results. The standard errors in Table C-5 were calculated with this formula.

$$s_{x,p} = \sqrt{\frac{b}{x}\,p(100 - p)} \qquad (4)$$

Here x is the total number of persons, families, households, or unrelated individuals in the base of the percentage, p is the percentage ($0 \le p \le 100$), and b is the parameter in table C-6 associated with the characteristic in the numerator of the percentage.

Illustration. Table 1 shows that of the 13,927,000 persons aged 18 to 21, 44.0 percent were enrolled in college in 1994. Use the appropriate parameter from table C-6 and formula (4) to get

Percentage, p	44.0
Base, x	13,927,000
b parameter	2,557
Standard error	0.7
90% conf. int.	42.8 to 45.2

The standard error is calculated as

$$s_{x,p} = \sqrt{\frac{2,557}{13,927,000}\,(44.0)(100.0 - 44.0)} = 0.7$$

The 90-percent confidence interval for the estimated percentage of persons aged 18 to 21 in 1994 enrolled in college is calculated as 44.0 ± 1.645 x 0.7.

The alternate calculation of the standard error, using formula (3), with f = 1.0 from table C-6 and s = 0.7 by interpolation from table C-5, is

$$s_{x,p} = 1.0 \times 0.7 = 0.7$$

Standard Error of a Difference. The standard error of the difference between two sample estimates is approximately equal to

$$s_{x-y} = \sqrt{s_x^2 + s_y^2} \tag{5}$$

where s_x and s_y are the standard errors of the estimates, x and y. The estimates can be numbers, percentages, ratios, etc. This will represent the actual standard error quite accurately for the difference between estimates of the same characteristic in two different areas, or for the difference between separate and uncorrelated characteristics in the same area. However, if there is a high positive (negative) correlation between the two characteristics, the formula will overestimate (underestimate) the true standard error.

Illustration. Table 1 shows that of the 58,140,000 males 35 years old and over, 1.7 percent were enrolled in college and of the 65,612,000 females of the same age group, 2.7 percent were enrolled in college. Use the appropriate parameters from table C-6 and formulas (2) and (4) to get

	x	y	difference
Percentage	1.7	2.7	1.0
Base	58,140,000	65,612,000	-
b parameter	2,557	2,557	-
Standard error	0.1	0.1	0.1
90% conf. int.	1.5 to 1.9	2.3 to 3.1	0.8 to 1.2

The standard error of the estimated differences calculated as

$$s_{x-y} = \sqrt{(0.1)^2 + (0.1)^2} = 0.1$$

The 90-percent confidence interval around the difference is calculated as 1.0 ± 1.645 x 0.1. Since the interval does not contain zero, we can conclude with 90-percent confidence that the proportion of females aged 35 and over enrolled in college is greater than that for males.

Table C-3. **1994 Standard Errors of Estimated Numbers: Total or White**

(Numbers in thousands)

Size of estimate	Total persons in age group

Table C-6. **1994 Standard Error Parameters and Factors for School Enrollment October 1994**

Characteristics	Total or White		Black		Hispanic	
	b	f	b	f	b	f
Persons Enrolled in School:						
Total	2,557	1.0	3,477	1.0	6,491	1.0
Children 13 and under	2,944	1.1	2,978	0.9	3,367	0.7
Marital Status	4,818	1.4	6,923	1.4	12,822	1.4
Household Characteristics:						
Head, wife, or primary individual	1,912	0.9	1,730	0.7	3,205	0.7
Child or other relative in primary family, secondary family member	4,818	1.4	6,923	1.4	12,822	1.4
Income, earnings	2,269	1.9	2,599	0.9	4,813	0.9

Notes: To estimate standard errors for school enrollment prior to 1994 multiply the b parameters for 1994 by the appropriate factor in Table C-7. The b parameters should be multiplied by 1.5 for nonmetropolitan residence categories. The b parameters should be multiplied by the factors in Table C-8 for regional data.

Table C-7. **Factors to Calculate b Parameters Prior to 1994**

Year	Total or White	Black or other races	Hispanic
1990-1993	1.04	1.03	1.16
1988-1989	1.08	1.08	1.30
1985-1987	0.91	0.91	0.93
1982-1984	0.91	0.91	0.77
1977-1981	0.82	0.82	0.68
1967-1976	0.80	0.80	0.67
1957-1966	1.22	1.22	(X)
Before 1956	1.83	1.83	(X)

Notes: Apply the appropriate factor to the b parameter for 1994. Use the Total or White factors to calculate standard errors for children 13 and under.

X Not applicable

Table C-8. **Regional Factors to Apply to 1994 b Parameters**

Characteristic	Factor
U.S. Totals	1.00
Region	
Northeast	0.74
Midwest	0.98
South	1.04
West	1.06
